

To ensure quality, service and competitiveness on all projects, BioClad® have a national network of approved independent installers able to cover all parts of the UK & Ireland.

BioClad® Premier Installers are trained and accredited by BioClad® to ensure that the highest standard in supply and installation is met.

The BioClad® UK & Ireland Premier Installer Network

BioClad® Overseas Network

BioClad® antimicrobial wall cladding is installed in hospitals, restaurants, hotel and leisure facilities in Europe, Asia, America and Australasia. Our international network of distributors and installers can demonstrate all the benefits of BioClad® antimicrobial wall protection, which meets international certifications including ASTM E84, EN 13501 and AS NZS 3837 - 1998.

We are always looking for new selling partners with strong relationships with the architectural and design communities, and for opportunities to supply BioClad® to their projects.

- Add vibrancy
- Durable
- Watertight
- Easy to Clean
- Bespoke and Brand colours
- LRV's available on request
- Works in all kinds of areas

The world's first antimicrobial PVC wall cladding with BioCote.

The modern alternative to tiles.

- Stops growth 24/7
- Inhibits bacteria
- Carries lifetime guarantee
- Reduces HCAI's
- Reduces manufacturing costs
- Reduces installation costs
- No aggressive cleaning fluids
- Works in all kinds of areas

Vivid White

The Vivid[®] Colour Range is a bright and dynamic cladding system that has been created to enhance your environment. The bold colours have been chosen to add vibrancy to shops, bars & restaurants for a finish that is stylish, durable, watertight and easy to clean.

Vivid[®] is available in bespoke & brand colours to complement a corporate brand and create atmosphere whether used as a feature wall or fitted throughout. Vivid[®] allows you to create a designer look whilst keeping the benefits of hygienic wall cladding over ceramic tiling.

Satin White

BioClad[®] has an antimicrobial additive impregnated throughout the panels at the time of manufacture. This helps stop the growth of bacteria and mould and works continuously for the lifetime of the panels.

As well as reduced manufacturing and installation costs, hygienic cladding has far fewer joints so less area for water to penetrate and cause failure unlike tiles. Hygienic cladding has been shown to have better impact & stain resistance than traditional tiling. There's low water vapour transmission so no penetration of damaged surfaces or grout.

BioClad[®] is an additional line of defence to inhibit growth of MRSA, E.Coli, Salmonella & mould by up to 99.9%
